# RHEOLOGICAL PROPERTIES

DEEP

MEDIUM

LIGHT

VISCOSITY (PAS*S)	162	100	63
G' (PA)	300	190	130
G'' (PA)	65	40	40
GAUGE (NEEDLE USED*) <small>*TERUMO NEEDLE</small>	27 g	30 g	30 g
CANNULA	23g cannula		

G' is defined as the elastic modulus or storage modulus and is a measure of how resistant a gel is to deformation. Materials with lower G' behave more like syrup, while materials with higher G' behave more like a rubber ball.

G'' IS RELATED TO INJECTABILITY.
