Facial sagging, elasticity loss and aging signs.

SUGGESTED PROTOCOLS

General recommendations

Treatment duration	4-5 weeks
Sessions	4-10
Treatment frequency	Twice a week.
Product preparation	Dissolve the vial content in 3 ml of saline solution. NOTE: Each reconstituted vial contains the right amount for one single dose.
Skin preparation	Using a disposable moist sponge, remove make-up from face and neck with a surfactant-free gel. Dry the area with a paper towel and tone the skin afterwards.
Skin diagnosis	It is important to perform an accurate skin diagnosis since it will indicate the correct product or product mix to use.

Manual application protocol

Steps	Duration	Details
Step 1	5-7 minutes	With the help of the hands or with a brush, apply the product by performing a gentle massage until complete absorption.
Step 2	5-10 minutes	Apply Sun Protection Factor (SPF).

Electroporation protocol

Steps	Duration	Details
Step 1	20-25 minutes	Apply product in small doses and facilitate penetration by gently passing the electroporation equipment. Repeat operation until complete absorption of the product on face, neck and décolletage.
Step 2	5-10 minutes	Apply Sun Protection Factor (SPF).

Radiofrequency protocol

Steps	Duration	Details
Step 1	5-7 minutes	With the help of the hands or with a brush, apply the product by performing a gentle massage until complete absorption.
Step 2	25-30 minutes	Perform regular radiofrequency session, using the conductive gel. Remove conductive gel and apply lotion.
Step 3	5-10 minutes	Apply Sun Protection Factor (SPF).

Ultrasound protocol

Steps	Duration	Details
Step 1	20-25 minutes	Apply product in small doses and facilitate penetration by gently passing the ultrasound equipment. Repeat this operation until complete absorption of the products on face, neck and décolletage.
Step 2	5-10 minutes	Apply Sun Protection Factor (SPF).

Laser diode protocol

Steps	Duration	Details
Step 1	25-30 minutes	Perform regular laser diode session by using the conductive gel. Remove conductive gel and apply lotion.
Step 2	5-7 minutes	With the help of the hands or with a brush, apply the product by performing a gentle massage until complete absorption.
Step 3	5-10 minutes	Apply Sun Protection Factor (SPF).

Dermaroller protocol

Steps	Duration	Details
Step 1	20-25 minutes	Apply the product in small doses and in small areas. Facilitate penetration by gently passing the Dermaroller. Repeat this operation on face and neck by using almost the total quantity of the product. Finish application by performing a gentle massage with the remaining quantity of the product.
Step 2	5-10 minutes	Apply emollients, moisturizing creams or moisturizing emulsions with Sun Protection Factor (SPF).
NOTES		The use of gloves is advisable in order to avoid skin infections.
		Recommended depths for facial treatments with Dermarollers are: 0.5mm to 1.0mm.
		For correct penetration of microneedles in the skin, Dermaroller bearings should be repeated 4-8 times in vertical, horizontal and diagonal orientations by gently applying pressure.
		It is important to advise patients on the use of 50SPF for 24-48 hours after treatment.
		IMPORTANT: Dermarollers must be used individually and is not to be shared with different patients.
